## Overview

### Note

This sample code project is associated with WWDC25 session 259: [Code-along: Add Intelligence to your App using the Foundation Models framework](#).

## Configure the sample code project

To configure the sample code project, do the following:

1. Open the sample with the latest version of Xcode.
2. In Xcode, set the developer team for the app target to let Xcode automatically manage the provisioning profile. For more information, see [Set the bundle ID](#) and [Assign the project to a team](#).

3. In the developer portal, enable the WeatherKit app service for your bundle ID to access weather information.

## See Also

### Essentials

-  **Generating content and performing tasks with Foundation Models**  
Enhance the experience in your app by prompting an on-device large language model.
-  **Improving the safety of generative model output**  
Create generative experiences that appropriately handle sensitive inputs and respect people.
-  **Support languages and locales with Foundation Models**  
Generate content in the language people prefer when they interact with your app.

`class SystemLanguageModel`

An on-device large language model capable of text generation tasks.

`struct UseCase`

A type that represents the use case for prompting.
